LOCATION

Directions:

We are located on Bathurst St., one block north of Steeles, on the north-east corner of Bathurst and Townsgate. We are the south-most unit of the plaza, next door to What a Bagel. Do not enter the plaza as we have our own entrance from outside.

ENG/VNG (Electronystagmography/Videonystagmography)

EXPLANATION:

An ENG/VNG test is used to identify inner ear disorders causing vertigo or dizziness. During the test electrodes are applied around your eyes or Video Goggles are worn to measure nystagmus, an involuntary movement of your eyeball will be measured. Several recordings of eye motion will be made while you move your head up and down, left and right and while you follow a moving light. Some tests will be performed while small quantities of warm and cold water or air if the eardrum is perforated are placed in your ear canals. The ENG/VNG test takes approximately 30 minutes.

INSTRUCTIONS:

Please do not eat for three hours before the ENG/VNG test and keep liquids to a minimum. **IF YOU ARE DIABETIC, EAT A LIGHT MEAL AND DO NOT SKIP ANY MEALS.** For 24 hours prior to your appointment, refrain from taking sedatives, tranquilizers, sleeping pills, anti-depressants, pain, cold or allergy medication, drugs for nausea or dizziness and alcoholic beverages as they may adversely affect the test results. If you are on any medications for heart, blood pressure, thyroid, cholesterol, diabetes or epilepsy, continue these as usual. Please refrain from applying moisturizer or make up to your face before your test. **Due to the fact that some patients may experience prolonged dizziness or nausea after the test is completed, it is recommended that you have someone drive you home after the test if possible.** Please check in at least 10 minutes early.
